Fabric Fire Resistance: Camira Cara, Sonus (BS EN 13501-1 Class B,s1,d0)
Weight: 40mm thick Comfort Range panels weigh 4.5kgs/m2

Installation

The panels must be handled with clean hands or with clean gloves to avoid marks to the panels.

Ensure all wall surfaces to which the panel will be applied to are clean and dry. Panels can be fixed to most surfaces including concrete, plasterboard and block work providing they are solid. Wallpaper should be removed. Emulsion paint brushed with a stiff brush. The surface where the panels are applied to must have no cold bridging and must be damp free. Any signs of condensation or dampness on the surfaces of the wall and ceilings must be covered and eliminated before applying the panels.

The surface must be 100% flat to make sure the panels are fixed securely. The panels have a peel off paper to the back which must be taken off and the panels must be immediately applied to the surface to make sure good adhesion is made.

Spray Adhesive must be applied to the ceiling and fully to the back of the panel for ceiling panel installation.
